

Analysis Of Use Case 1

Use Case Name:	Add Doctor	
Actor:	Administrator	
Description:	This use case describes the process of adding a new doctor into the clinic system. The administrator enters the doctor information and the system stores the doctor record successfully.	
Typical Course of Events	Actor Action	System Response
	Step1: The administrator selects add doctor option. Step3: The administrator enters doctor information : name, specialty, phone number, Id, Password, Email. Step7: The administrator reviews the confirmation message.	Step2: The system displays the add doctor form. Step4: The system validates the entered information. Step5: The system stores the doctor data in the database. Step6: The system generates a confirmation message indicating the doctor was added successfully.
Alternate Courses:	Step4: If any required information is missing, the system displays an error message requesting the administrator to complete the missing fields. Step5: If the doctor already exists in the system, the system prevents duplication and requests different information.	
Precondition:	Only administrators can access the add doctor function.	
Post condition:	The new doctor record has been successfully stored in the system.	
Assumption:	The clinic system database is available and functioning correctly.	

Analysis Of Use Case 2

Use Case Name:	Add Diagnosis	
Actor:	Doctor	
Description:	This use case describes the process of a doctor adding a diagnosis to a patient record after examining the patient.	
Typical Course of Events	Actor Action	System Response
	Step1: The doctor selects a patient from the appointment list. Step3: The doctor enters the diagnosis information. Step7: The doctor reviews the updated patient record.	Step2: The system displays the patient medical history and details. Step4: The system validates the diagnosis data. Step5: The system saves the diagnosis into the patient record. Step6: The system updates the patient history with the new diagnosis.
Alternate Courses:	Step4: If the diagnosis information is incomplete, the system requests the doctor to enter the missing data.	
Precondition:	The doctor must be logged into the system and assigned to the patient appointment.	
Post condition:	The patient diagnosis has been recorded successfully.	
Assumption:	The patient information already exists in the clinic system.	

Analysis Of Use Case 3

Use Case Name:	Book Appointment	
Actor:	Patient	
Description:	This use case describes the process of a patient booking a new appointment with a doctor through the clinic system.	
Typical Course of Events	Actor Action	System Response
	Step1: The patient selects the book appointment option. Step3: The patient chooses the doctor, date, and appointment time. Step6: The patient completes the payment process.	Step2: The system displays available doctors and schedules. Step4: The system checks the availability of the selected appointment slot. Step5: The system requests payment information Step7: The system verifies the payment transaction. Step8: The system records the appointment details in the database. Step9: The system sends an appointment confirmation notice to the patient.
Alternate Courses:	Step4: If the selected appointment slot is unavailable, the system requests the patient to choose another time. Step7: If the payment transaction fails, the system displays a payment failure notification and requests another payment method .	
Precondition:	The patient must be registered and logged into the system.	
Post condition:	The appointment has been successfully recorded and confirmed.	
Assumption:	The doctor schedule is already available in the system.
